

# Trim Maker®

Trim Maker is easy to order. Simply select the trim shape and accompanying base that best fits your requirements. Next calculate the amount of material you need (overall length) and determine the number of 12' stock lengths required.

When your application of Trim Maker leaves an outside edge exposed, endcaps may be inserted to give the trim a more finished appearance. Most shapes have a matching left hand and right hand endcap available. Endcaps are designed to install by sliding their tabs into the base, or by siliconing the endcap to the end of the trim.
